Profile

Software Engineer & Data Scientist with a strong foundation in **Backend Development** and **Artificial Intelligence** . Expert in architecting **scalable RESTful APIs** and **predictive ML models** using **Python (Scikit-learn, Pandas, NumPy)** and **PHP (Laravel)** . Proven ability to **optimize database queries** and deliver **full-stack projects** that transform complex data into **interactive dashboards** . Adept at **translating complex requirements** into **clean, maintainable code** and **innovative software solutions** that drive performance and efficiency

Professional Experience

Digital Egypt Pioneers Initiative (DEPI), *Data Science Intern* 12/2025

- **Spearheaded Exploratory Data Analysis (EDA)** on high-volume datasets using **Pandas** and **NumPy**, uncovering critical trends that informed feature selection for predictive modeling .
- **Engineered and optimized** predictive machine learning models (Regression & Classification) via **Scikit-learn**, achieving a **90% model accuracy** on project datasets .
- **Developed interactive data visualizations** using **Matplotlib** and **Seaborn** to translate complex statistical findings into actionable insights for stakeholders .
- **Architected automated data cleaning pipelines**, ensuring **99% data integrity** for large-scale model training .
- Utilized **analytical problem-solving** and **technical communication** to collaborate within an agile team environment.

NTI, *Python Developer Intern* 07/2025 – 08/2025

- Developed **3+ scalable Python applications** using **Flask and Django**, improving backend performance by **15%** through optimized code readability .
- Automated manual data entry tasks by engineering modular components, saving the team **5+ hours of weekly manual work** .
- Practiced **agile collaboration** and rigorous code reviews to ensure high standards of software development.

Array, *Back-End Developer (Internship)* 06/2025

- Architected a scalable **PHP/Laravel** e-commerce backend managing an inventory of **50+ products** and processing **50+ transactions** monthly .
- Reduced database load by **20%** by implementing **Eloquent ORM** optimizations, eager loading, and strategic indexing .

Education

Bachelor of Computer Science, *Menoufia University* | *Expected June 2026* 09/2022 – 06/2026

Relevant Coursework: Machine Learning, Artificial Intelligence, Database Systems,
Data Structures & Algorithms, Software Engineering, and Object-Oriented Programming (OOP)

Skills

- Python
- Java
- SQL
- Flask
- Pandas
- NumPy
- Seaborn
- Statistical Analysis
- CSS
- Git/GitHub
- OOP
- PHP
- C++
- Laravel
- Django
- Scikit-learn
- Matplotlib
- Machine Learning
- HTML
- RESTful APIs
- Database Systems
- WordPress
